ZORUS

Archon delivers improved security for your clients.

Today's workers use multiple devices and are on the move, presenting unique security challenges. Traditional UTM systems are not enough as witnessed by continued high profile Infections and breaches. Archon delivers a next-generation web filtering layer designed to help overburdened UTM systems meet security requirements.

Five ways Archon outperforms other web filtering security.

Proxy Based Web Filtering
Archon filters traffic through a proxy system allowing you to grant access to some parts of a site while blocking other. And where DNS leaves users exposed if a safe site is compromised with malvertising, Archon's proxy scans all portions regardless of reputation.

Total Endpoint Protection
Traditional UTM systems only protect devices inside their networks, leaving employees outside the perimeter exposed. Archon protection travels with the device.

Cloud Based Management
Centrally managed and deployed with a single click, Archon eliminates the need to maintain costly hardware. Updates are sent to all protected devices regardless of their location eliminating the need to VPN back into the security perimeter for protection.

Machine Learning Optimization
Capable of learning from each new deployment and scanned site, Archon self optimizes. Discoveries are then shared to ensure the entire Archon-protected community of networks benefit.

Better Security Visibility
Through its intuitive dashboard and detailed reporting, Archon can provide levels of visibility other systems can't. Monitor logs, track activity, see who did what, when and where.

**Upgrade your clients to better security with Zorus Archon.**

A Better Business Opportunity for You.

Sold exclusively through our MSP relationships, Archon is designed to offer the best frontline level of web-filtering security available. In addition, Archon reduces your cost and overhead while increasing revenue opportunities for you.

Archon is a smarter approach to web security Here's why:

Deployment, maintenance, monitoring and reporting are all easily managed from Archon's robust dashboard.

Better protection, more easily deployed.
Archon protects at the device level through a local agent connected to a cloud platform. With a single click, you can deploy Archon to an entire network, from your desk.

It's easier to manage and maintain.
With Archon, you don't need to maintain local hardware and client facilities. Updates are distributed through cloud-based architecture, allowing you to update a network (or many networks) quickly and easily.

Scales easily
Providing Archon security to new users or entire new companies is quick and easy and can usually be done without leaving your office.

Simple pricing. Added revenue potential.
While it provides coverage by device, Archon is offered through a subscription model based on users. That means MSPs can resell Archon by device, potentially widening their margins.

It costs less.
Add up the hard cost savings from forgoing hardware maintenance expenses and the value of the time and effort associated with working on-site with clients and Archon simply costs less.

Built to grow with your business
Archon's pricing model is tiered, offering discounted subscription rates at higher volumes. As you grow your business and deploy Archon more broadly, your costs decrease, and your profits increase.

Protect your client and grow your revenue with Archon.
Archon is easily deployed, designed to reduce your operating costs and offered with room for real revenue generation. Ask for a demo today.
